Company Overview

iVote is a Balkan region leader in the implementation of time critical and secure web based projects, with its consultants having sound references in numerous successful projects for technical assistance, capacity building, specific services and consultancy in the region including Kosovo, Albania, Bosnia and Herzegovina, Macedonia, Serbia, Croatia, Turkey.

The company has turn key solutions for: web based e-business solutions, customer management systems, elections management, document management, e-testing and e-surveys, workflow management and it is also focused on special software development for the needs of specific clients (public governmental bodies and businesses).

Mission

The main technology focuses are ASP.NET, JavaScript, AJAX, MS SQL, and recently, HTML5, iOS and Android mobile application development. The extensive experience in a wide variety of tools/technologies can help the clients in selecting the optimum technology/platform for their software solutions.

Papirium

Get organized! Efficient and effective control on every aspect of your information flow!

As organizations are entering the information and knowledge era they are under the increased pressure of the global competition and the fast access to information is a key factor of success. The Papirium application can be the most valuable asset of every organization providing a possibility for the information to be organized in the best possible way. Thus the search and retrieval of every piece of data is made as an easy job. This means that the productivity is increased at the highest possible level.

Papirium consists of two different modules that can be implemented depending on the clients' needs. Papirium archive and Papirium Flow

Papirium archive

The electronic archive of scanned documents, the unlimited number of document types, document versioning and version control as well as document locking/unlocking mechanism all add to the value of the most effective and efficient organization of information in every organization – with Papirium archive.

Papirium archive provides a possibility of extensive search capabilities of documents. This system also provides much other functionality like: process automation, e-mail integration, security control features that can be especially useful as the work can be made more reliable and productive.

Papirium Flow

Papirium Flow is a web-based application designed to achieve maximum efficiency in management of business processes. The information communication capabilities of the Internet and local Intranet are combined in order to achieve better process automation and to improve the capabilities of the workflow.

This application automates the process of planning, tracking and performance of various tasks in the organization, at the same time providing automated notifications on predefined tasks and significant events. As a result users can get productivity improvement in information – related activities.

Welcome, to your perfectly organized paperless office

Papirium Flow

Automates the process of planning, tracking and performance of various tasks.

iVote Demokra™

fast, accurate and precise election results

The iVote Demokra™ integrated elections platform is innovative proprietary software that supports all election processes from registration of voters to managing mandates.

iVote Demokra™ allows for easy, practical and comprehensive evaluation of exit polls data for all sorts of elections. iVote supports open and closed lists and different kinds of aggregated voting models.

iVote Demokra™ is designed using cutting-edge technology and offers secure, convenient and trustworthy functionalities that contribute to fast, accurate and precise election results. It offers complete control over the electoral process in all the stages.

The iVote Demokra™ platform enables:

Setup, overview and management of the whole electoral processes

Data entry of all required results

Comprehensive data analysis and statistics

Detailed reports and support to the electoral commission's Public Relations

Visual and graphical tools for data representation online and in real-time

The iVote Demokra™ enables live streaming of results on the Internet offering transparency and immediate public insight in the process.

The iVote Demokra™ is a modular platform customizable towards your needs. Different modules can be combined to match election requirements. For detailed information about iVote Demokra™, its functionalities and different modules, please visit iVote.mk/Demokra

Smooth and easy performance
Accountable and efficient
Secure, convenient and trustworthy

EPISTUM

Be a winner in the knowledge business

The Epistum web-application is a questionnaire survey service that is grounded in marketing and social media expertise. It takes traditional survey tools to a whole new level. Epistum provides the opportunity to create surveys, collect responses and analyze results.

Every organization would value its functionalities:

Unlimited number of surveys

Define custom strategies for exam test creation

Follow the learning path of every user in the system

Several types of questions (multiple choice, single choice, simple text entry etc)

Detailed statistics for the answered tests or surveys

Integration of the Epistum Software with Statistical software like Excel, SPSS and Atlas T

This application was developed to address issues with effectiveness and efficiency of using electronic testing tools for assessment purposes. Epistum is also the best solution for the universities as it makes the process of gaining knowledge easier.

The main functionalities that would especially be valuable for the universities are:

Details about every user records

Several types of questions (multiple choice, single choice, simple text entry etc)

Automatic evaluation of answers

Detailed statistics for the answered tests

Opportunity to create surveys and tests, collect responses and analyze results
