

Mk Vote Phase 2

case study

State Election Commission's Integrated Information System for managing the Parliamentary Elections' Processes

Client: Central Election Commission in Macedonia

Industry: Public Sector

Challenge:

- Complete solution.
- Increased transparency.
- Short time for completion of the project.

Solution:

A new, improved, integrated information system.

This year's election process was performed flawlessly again, and in the shortest possible time, as a result of the quality performance of the system, accurate and transparent results were published. The SEC's satisfaction from the performance of their processes was obvious. The objective of presenting a clear picture of the whole election process in front the public was achieved and their reactions were also totally positive.

The new and improved functionalities were delivered by the following modules:

- Module for administration and setting the parameters for the elections
- Module for monitoring the elections day
- Module for entering the results and reports
- Module for audit and investigation
- Module for allocation of mandates
- Module for simulation of the impact of the pooling stations on the final results
- Module for the members of the SEC
- Web site for displaying the results and the turnout
- Application for presenting data in press centers

Success:

More than 2,2 million page views from 80 countries on the Macedonian State Election Commission's results website after the parliamentary elections 2011.
