

Mk Vote

case study

software for automatic evaluation of the results from the election process

Client: State Election Commission in Macedonia

Industry: Public Sector

Challenge:

The challenge was the aim to provide a clear overview during the election process, improve the transparency and accountability and significantly reduce the time needed to publish the results.

Solution:

Since 2007, when the State Election Committee from Macedonia choose iVote's Information System, the Integrated Information system iVote Demokra - the data gathering software to be used for the Parliamentary Elections 2007 and Local Elections 2008, the company is experienced trusted partner of the State Election Committee in Macedonia and is providing the needed support for all the elections in Macedonia.

The iVote Demokra software as well as tools and procedures, for automatic evaluation of the results from the election processes meet all the requirements that come on the way, as a complete solid software solution. iVote's experts also provide IT consultancy and expertise to the election process.

Success:

The time needed to process and publish the results has greatly reduced compared to the previous elections, giving the SEC a clear picture of the state during the whole election process.
