PRESS RELEASE

Date 22.10.2014

Demokra to Leverage 2015 Local Elections in Albania

The iVote's leading IT experts and architects of the Demokra system delivered the new modules for the integrated elections management system that will leverage the 2015 local elections in Albania. The project for modernization of the election processes in Albania is financed by USAID and managed by Assist Impact, a non-profit organization that is in cooperative agreement with USAID. The project started in April 2014 and now began its final phase with delivering of the system.

"We completed the final phase of the project by rolling out the upgraded version of the Demokra technology. Local Elections in Albania 2015 were another challenge for the iVote team, having many specific requirements and demands. That is why we were tempted to deliver fully functional, user friendly system that incorporates all these demands thus providing pleasant user experience". – said prof. Ljupcho Antovski, project consultant and Board Member at iVote.

iVote Demokra election technology renders intuitive, user-friendly experience for the users. Customized modules have been developed. The system is installed on the servers of CEC. The transfer of election data is secured with the latest available technologies, providing trustworthy, transparent election results and reports. Modules will provide automation and ease of many processes such as: tracking, management of Election Day functions, results consolidation, audit, investigation and internal reports and Election Night Reporting – ENR (Official Web Site for Results). System administrators have access to the dash board where they can follow various statistical data and diagrams for the progress of entry results, turnout and last activity of all entry operators. Import of all election data has been optimized making processing stage more efficient and faster. System also reflects the existence of the miscast ballots in the wrong boxes and the new electoral units under territorial law. Public will follow preliminary live results at many portable devices including PC-s, tablets and mobile phones.

Likewise, e-learning management system with new upgraded courses is tailored as an essential part of the integrated election management system. Using the LMS, CEC staff will enhance their skills and knowledge through interactive learning modules. The system supports online courses, video lessons, conference tools, peer-to-peer communication methods, different format of learning materials, e-tests and quizzes.

About iVote:
iVote is company specialized in election modernization technologies, e-commerce and e-learning systems. iVote'sDemokra is an end-to-end state of the art election management platform, providing high security and transparency. iVoteDemokra technology has been trusted by more than 116 million voters processed around the world. It has contributed to the most timely, transparent and credible election results in the history as democracies in many countries worldwide.
